

DevEx: Working with IndexedDB (TASK A)

Objective

Implement the following flow using **IndexedDB**.

You should use **Dexie.JS**.

Project Setup

1. Clone a starter project from GitHub using the following command:

```
git clone https://github.com/tomuench/devex_starter
cd devex_starter
npm install
npm start
```

2. Further Instructions see readme.md.

Instructions

1. Clone npm start project
2. Create a new IndexedDB database named **DevExTaskA**.
3. Inside this database, create a table called **games** with the following attributes:
 - name (string)
 - releaseAt (string or date)
 - score (number)
4. Before inserting data, ensure the table is cleared (optional but helpful for testing).
5. Add five game entries to the games table.
 - You are free to choose the values for name, releaseAt, and score.
6. Log the inserted games to the browser console.
